Institute of Psychology, JGU Mainz  
Leibniz Institute for Resilience Research

### “How the COVID-19 Pandemic Impacts Scientists – About Risks and Coping Options”

The COVID-19 pandemic has not only created health hazards (i.e. catching the virus) but has also induced massive restrictions on our private and working life. Empirical evidence will be presented on how the pandemic has affected scientists and other employees in research organizations. Changing work routines, restrictions in conducting research, and attitudes like job insecurity will be discussed as well as related consequences for mental health and well-being. Learn coping options for the individual, team, and organizational levels.

**Wednesday, 21 April 2021, 12:00 (s.t.)**  
(CEST/UCT+2)

The seminar will take place online via Zoom.

To receive login data, please register [here](#).

This seminar is co-organised by GenEvo and  
SFB 1361.
